

# Instance Segmentation

**Note:** Using the Docker container in the factory image does not require re-setting up the environment. The environment is already set up. Simply enter Docker and run the corresponding function command according to the previous tutorial.

## 1. Instance Segmentation: Image

Use yolo11n.pt to predict images provided with the Ultralytics project.

Go to the code folder:

```
cd /root/ultralytics/ultralytics/yahboom_demo
```

Run the code:

```
python3 02.segmentation_image.py
```

### Preview

Yolo recognition output image location: /root/ultralytics/ultralytics/output/

Sample code:

```
from ultralytics import YOLO

# Load a model
model = YOLO("/root/ultralytics/ultralytics/yolo11n-seg.pt") # pretrained
yolo11n-seg model
# model = YOLO("/root/ultralytics/ultralytics/yolo11n-seg.onnx")
# model = YOLO("/root/ultralytics/ultralytics/yolo11n-seg_ncnn_model")
```

```
# Run batched inference on a list of images
results = model("/root/ultralytics/ultralytics/assets/zidane.jpg") # return a
list of Results objects

# Process results list
for result in results:
    # boxes = result.boxes # Boxes object for bounding box outputs
    masks = result.masks # Masks object for segmentation masks outputs
    # keypoints = result.keypoints # Keypoints object for pose outputs
    # probs = result.probs # Probs object for classification outputs
    # obb = result.obb # Oriented boxes object for OBB outputs
    result.show() # display to screen

result.save(filename="/root/ultralytics/ultralytics/output/zidane_output.jpg")
# save to disk
```

## 2. Instance Segmentation: Video

Use yolo11n.pt to predict videos in the Ultralytics project (not included with Ultralytics).

Go to the code folder:

```
cd /root/ultralytics/ultralytics/yahboom_demo
```

Run the code:

```
python3 02.segmentation_video.py
```

### Preview

Yolo recognition output video location: /root/ultralytics/ultralytics/output/

Sample code:

```

import cv2
from ultralytics import YOLO

# Load the YOLO model
model = YOLO("/root/ultralytics/ultralytics/yolo11n-seg.pt")
# model = YOLO("/root/ultralytics/ultralytics/yolo11n-seg.onnx")
# model = YOLO("/root/ultralytics/ultralytics/yolo11n-seg-ncnn_model")

# Open the video file
video_path = "/root/ultralytics/ultralytics/videos/people_animals.mp4"
cap = cv2.VideoCapture(video_path)

# Get the video frame size and frame rate
frame_width = int(cap.get(cv2.CAP_PROP_FRAME_WIDTH))
frame_height = int(cap.get(cv2.CAP_PROP_FRAME_HEIGHT))
fps = int(cap.get(cv2.CAP_PROP_FPS))

# Define the codec and create a Videowriter object to output the processed video
output_path =
"/root/ultralytics/ultralytics/output/02.people_animals_output.mp4"
fourcc = cv2.VideoWriter_fourcc(*'mp4v') # You can use 'XVID' or 'mp4v'
depending on your platform
out = cv2.VideoWriter(output_path, fourcc, fps, (frame_width, frame_height))

# Loop through the video frames
while cap.isOpened():
    # Read a frame from the video
    success, frame = cap.read()

    if success:
        # Run YOLO inference on the frame
        results = model(frame)

        # Visualize the results on the frame
        annotated_frame = results[0].plot()

        # Write the annotated frame to the output video file
        out.write(annotated_frame)

        # Display the annotated frame
        cv2.imshow("YOLO Inference", cv2.resize(annotated_frame, (640, 480)))

        # Break the loop if 'q' is pressed
        if cv2.waitKey(1) & 0xFF == ord("q"):
            break
    else:
        # Break the loop if the end of the video is reached
        break

# Release the video capture and writer objects, and close the display window
cap.release()
out.release()
cv2.destroyAllWindows()

```

## 3. Instance Segmentation: Real-Time Detection

### 3.1. Launching the Camera

Launch the following program based on your camera model. In the terminal, enter:

```
#usb camera
ros2 launch usb_cam camera.launch.py
#nuwa camera
ros2 launch ascamera hp60c.launch.py
```

Open another terminal and navigate to the code folder:

```
cd /root/ultralytics/ultralytics/yahboom_demo
```

Run the code: Click the preview screen and press q to terminate the program!

```
python3 02.segmentation_camera_usb.py
```

### Preview

Yolo recognition output video location: /root/ultralytics/ultralytics/output/

Sample code:

```
#!/usr/bin/env python3
import rclpy
from rclpy.node import Node
from sensor_msgs.msg import Image, CompressedImage
from cv_bridge import CvBridge
import cv2
```

```

from ultralytics import YOLO
import os
